

COMPREHENSIVE PROJECT PROFILE

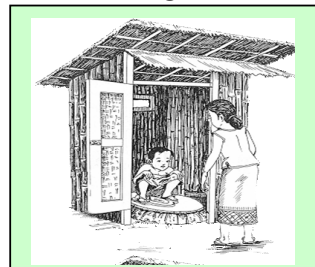

I. PROJECT DESCRIPTION

1. **PROJECT TITLE** : **A Healthy Surrounding to a Happy Family Environment thru Improved Access to Sanitary Toilets for the Indigent Families in the Municipality of Danao.**

2. **PROJECT TYPE** : **Capital Formation**

3. **PROJECT COMPONENT**

- 3.1 Engineering Survey Work.
- 3.2 Infrastructure development (hands-on fabrication of toilet bowls, construction of toilet sheds and water tank)

4. **PROJECT LOCATION:** **17 Barangays in the Municipality of Danao, Bohol**

II. **PROJECT STATUS:** **Proposed with Project Idea Available**

III. PROJECT JUSTIFICATION

1. PROJECT BACKGROUND

Based on the 2005 Local Poverty Database in Danao, sanitation problem ranked number five (5), among the top 12 poverty indicators in the municipality. This means that there are 398 or 20% of the households living below poverty line without sanitary toilets. These households were categorically distributed in the 17 barangays, which really need immediate attention. Majority of these barangays are situated in the upland areas and the town including low lying barangays are dependent on the ground water sources for drinking water, and any other domestic uses. A great possibility that the health risks in the community increases due to the occurrence of water-borne diseases caused by 3-coli bacteria.

The vision of Danao geared towards an ecotourism destination in the province and even the country. But much has yet to done to improve the sanitation problem on both quality and quantity. Existing intervention on solid waste management is underway but more focus on the collection of mixed garbage wastes forgetting on the human wastes, which could eventually contribute to water contamination if not properly taken cared off by the health sector. Since

On-going actual survey and evaluation of households in the 17 barangays had already been done with a complete masterlist of the target beneficiaries in every barangays who are qualified to avail the assistance.

The proposed project if soon be realized will improve the health condition of the members of each family and enable them to perform more productive activity in household farming, thus increasing their family income that will afford them to buy the basic needs for their daily wants and consumption.

2. PROJECT LINKAGES

There are on going projects implemented by the Local Government Units thru Municipal Health Office and Non-government organization funded by the World Vision located in the four (4) barangays, which are complementary with each other and the learning experiences from the initiatives will serve as benchmark of its implementation to other areas.

3. PROJECT OBJECTIVES

- To improve the sanitation facilities of the residents of the 17 barangays of Danao in 2007.
- To eliminate the number of households without sanitary toilet by 398 of 0
- To reduce the occurrence of water-borne diseases in the municipality

4. SECTORAL OBJECTIVES

The project is very important to eradicate the occurrence of water-borne diseases, water pollution and help protect the natural resources specifically on water resources. As an agro-industrial and ecotourism town this can provide and attract a wholesome and sound environment.

5. REGIONAL AND NATIONAL OBJECTIVES

The project will directly respond to the Sanitation Code of the Philippines as one the mandates to be undertaken by the local government units. Moreover, it contributes to the overall attainment of the Millennium Development Goals, which is to combat the incidence of major diseases like water-borne and malaria and reduce the proportion of people without sustainable access to improved sanitation (WHO/UNICEF).

IV. PROJECT FINANCING

1. FUNDS NEEDED

Project Activity	Estimated Cost (Pesos)
1. Engineering Survey Works	100,000
2. Fabrication of Concrete Water Sealed Toilet (Latrines)	100,000
3. Construction of Septic Tank and Toilet Sheds	2,000,000
4. Construction of toilet water tank	300,000
Total	2,500,000

2. PROJECT FINANCING

Project will be funded on financial assistance from donor LGU, NGO and beneficiary. The project shall be monitored by the Engineering Office and health personnel. Release of fund is quarterly and purchase of material is by canvass or by bidding to be done in the municipal level. Supplies are delivered to the beneficiary, if counter part is available and having approved engineering survey works.

3. COUNTER PART FUNDING

The target beneficiaries are responsible for the construction of their own water-sealed toilets, which will form part as labor counterpart to the project. The Municipal Government of Danao will counterpart the construction materials for the fabrication of toilet bowls including travel allowances. The interested funding donors are responsible for the survey works, establishment of the toilet sheds and the water tank.

V. PROJECT BENEFITS AND COST

1. Beneficiaries

A total of 398 households without sanitary toilet are directly benefited and will indirectly benefit the whole municipality

2. Social Benefits

The project is expected to improve the health situation of the target beneficiaries as well as the physical surrounding of the community.

3. Economic Benefits

Economically, the beneficiaries will be able to save an amount for the cost medicines if they are safe from water-borne diseases due to poor human waste disposal system. This will relate to the time spent in the hospitals to the number of days for used by the farmers in farming activities.

4. Social and Economic Cost

The project would bring positive effects both social and economic hence no potential opposition of the negative impact is expected

5. Environment Cost

There will be no harmful effect due by the project, hence it enhances to a sound environment and healthy community.

VI. PROJECT IMPLEMENTATION

1. RESPONSIBLE AGENCIES

The project shall be administered by the Local Government Unit of Danao thru the Municipal Health Office and Municipal Engineering Office. Planning and Technical Assistance shall be provided by the Municipal Planning and Development Office in collaboration with the Municipal Social Workers Development Office and Non-Government Organizations and the Provincial Health Office.

2. IMPLEMENTATION SCHEDULE

The project is implemented through out the whole year. Beneficiary who will meet the criteria will be the basis implementation.

Project Activity	Implementation Schedule			
	Qtr 1	Qtr 2	Qtr 3	Qtr 4
1. Engineering Survey Works	_____			
2. Fabrication of Concrete Toilet Bowls	_____	_____	_____	_____
3. Construction of Septic Tank and Toilet Sheds	_____	_____	_____	_____
4. Construction of toilet water tank	_____	_____	_____	_____

3. ADMINISTRATIVE FEASIBILITY

The Municipal Government Unit of Danao has adequate knowledge and capacity to handle the implementation of the project thru the Municipal Health Office well-trained staff. There are a number of similar project successfully implemented and funded by foreign donors in the municipality.

4. SOCIAL ACCEPTABILITY

The proposed project is well accepted by the whole community with no opposition because they expect that the outcome of this project will bring to the positive impact of the health situation in the entire community.
